Progress Summary of Brian's Projects (\$1/19/2015)

			-	Bankal		
t. ArcGIS Server.	Geodatabase,	Services.	6,15	Portal,	and	AGG

t. ArcGIS Server, Geodatabase, Services, Gt9 Portal, and AGO

1) Troubleshooting High CPU Usage with the Feature Services (GIS-1883)

• We have worked with three technical support people (senior developers) from ESRI remotely. They have checked our ArcGIS Server map/feature services and configuration. They think 1) our ArcGIS Server map/feature service usually needs to intensively use CPU to retrieve the row data from the geodatabase and then send back to the client side for display?

• They suggest that we should skip ArcGIS 10.3.1 and directly upgrade to ArcGIS 10.4, which will be release in January 2016

Change 3-tier Geodatabase Connection to Direct Connect for our ArcG15 Server services (G15-1875)

Have modified the 150 mxd files (each with one ~ many tayers) from 3-tier connection to Direct Connect.

los file

Direct Connect.

Have republished the services
The following services need to further review (do we really need them?)

California_Shade6

Carrorma_snayeeu
Hydra.serv_curr_vu
Hydrantfests
Sacramento_County_Parcels_With_Ownership
SanJoaquin_County_Parcels_With_Ownership
WaterDistributionNetwork (with the old data and symbology)

3) Need a plan for changing the 3-tier connection to Direct Connect for all the layer files in our GIS Portal of the decide to some the 3-fier connection.

4) The Standard Procedures/Workflow for Publishing Dynamic Point Data on ArcGIS Server (GIS-1846, GIS-1847)

(35-1846, GS-1847)
We have created an Oracle account for the Construction Division and provided technical support for the Oracle database connection with Python programming. The users have developed a python script that can directly convert the Excel Spreadsheet to Oracle table (2-1 table (3-1 table (3

map service
The map service automatically refrestves itself whenever the users (management) click the (Excel) Button to run the Python script to update the Oracle table. The users are happy with the workflow and we should take it as the standard workflow for publishing the

with the workflow and we should take it as the standard workflow for publishing the dynamic point data.

II. AIM Mapping/SSGIS Replacement GIS Project (GIS-1802)

11. Have been writing on the feature classes with the spatial data who will feduce the symbology for publishing the services authorizing of the symbology for publishing the services authorizing of the replace the interest of the front-and to a html page, but waiting data to the real links and real data

11. Innovyze Internaster PRP Replacement Project (GIS-1803, 1897, 1482)

12. Have created the PRP Basemag (with largest scale 1:564) to avercome the standard AGO basemap scale limit (largest scale 1:1:128). We could use the passemap for other AGO maps/apps until Jenny has created the EBMUD passmap with the new aerial photo imagery

2.) Working on the PRP relever from 2015 to 2016

3.) Have been preparing for the data/map for the new 92P app
